WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (#) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: ALL CAUSES, DISEASE, INJURY

Morbidity from all causes during the week ended 26 October decreased by 2 percent as compared with the previous week, being reported at 483 per thousand strength per year.

INJURY:

The admission rate from injury dropped to the lowest point reported since the expansion of the "peacetime" Army, being at 29 per thousand; the rate had remained at 31 per thousand during the previous three weeks. Weekly variations in the admission rate for injuries are shown in the chart on the opposite page; it should be noted that the decline in the rate during the last three months of 1944 is due to a redefinition of "injury" published in September of that year ("Non-battle injury" admissions were therein defined as excluding "readmissions"). The sharp decline since V-E day has been more due to the rapid discontinuing of "dangerous" training activities than to any other factors.

The Fourth and Ninth Service Commands continued to report the highest rates for injuries (33 and 35 per thousand, respectively; other service commands had rates under 30 per thousand.

DISEASES:

Morbidity from all diseases in the United States as a whole decreased slightly (by 2 percent) to 454 per thousand (10 percent under the rate for the corresponding week of last year).

Increases over the preceding week, however, occurred in the Third Service Command (20 percent), the Fifth Service Command (5 percent) and the Sixth Service Command (9 percent). Little change during the week was noted in the First, Second, Seventh and Eighth Service Commands, while decreases of 3 percent in the Military District of Washington, 4 percent in the Fourth Service Command, and 11 percent in the Ninth Service Command were noted. Rates over 525 per thousand were reported in the Second and Third Service Commands and the Military District of Washington, while the First, Fourth, Fifth and Sixth Service Commands reported rates under 425.

Respiratory Diseases:

The rate for colds, influenza, etc., increased by 6 percent in the United States as a whole during the week, reaching 86 per thousand, as compared with last year's corresponding rate of 92.

Increases over the preceding week were reported in the First Service Command (64 to 76), the Third Service Command (73 to 99), the Eighth Service Command (91 to 116), and the Ninth Service Command (76 to 81).. While the rate remained unchanged in the Fifth and Sixth Service Commands, decreases of between 5 and 10 percent were reported in other service commands.

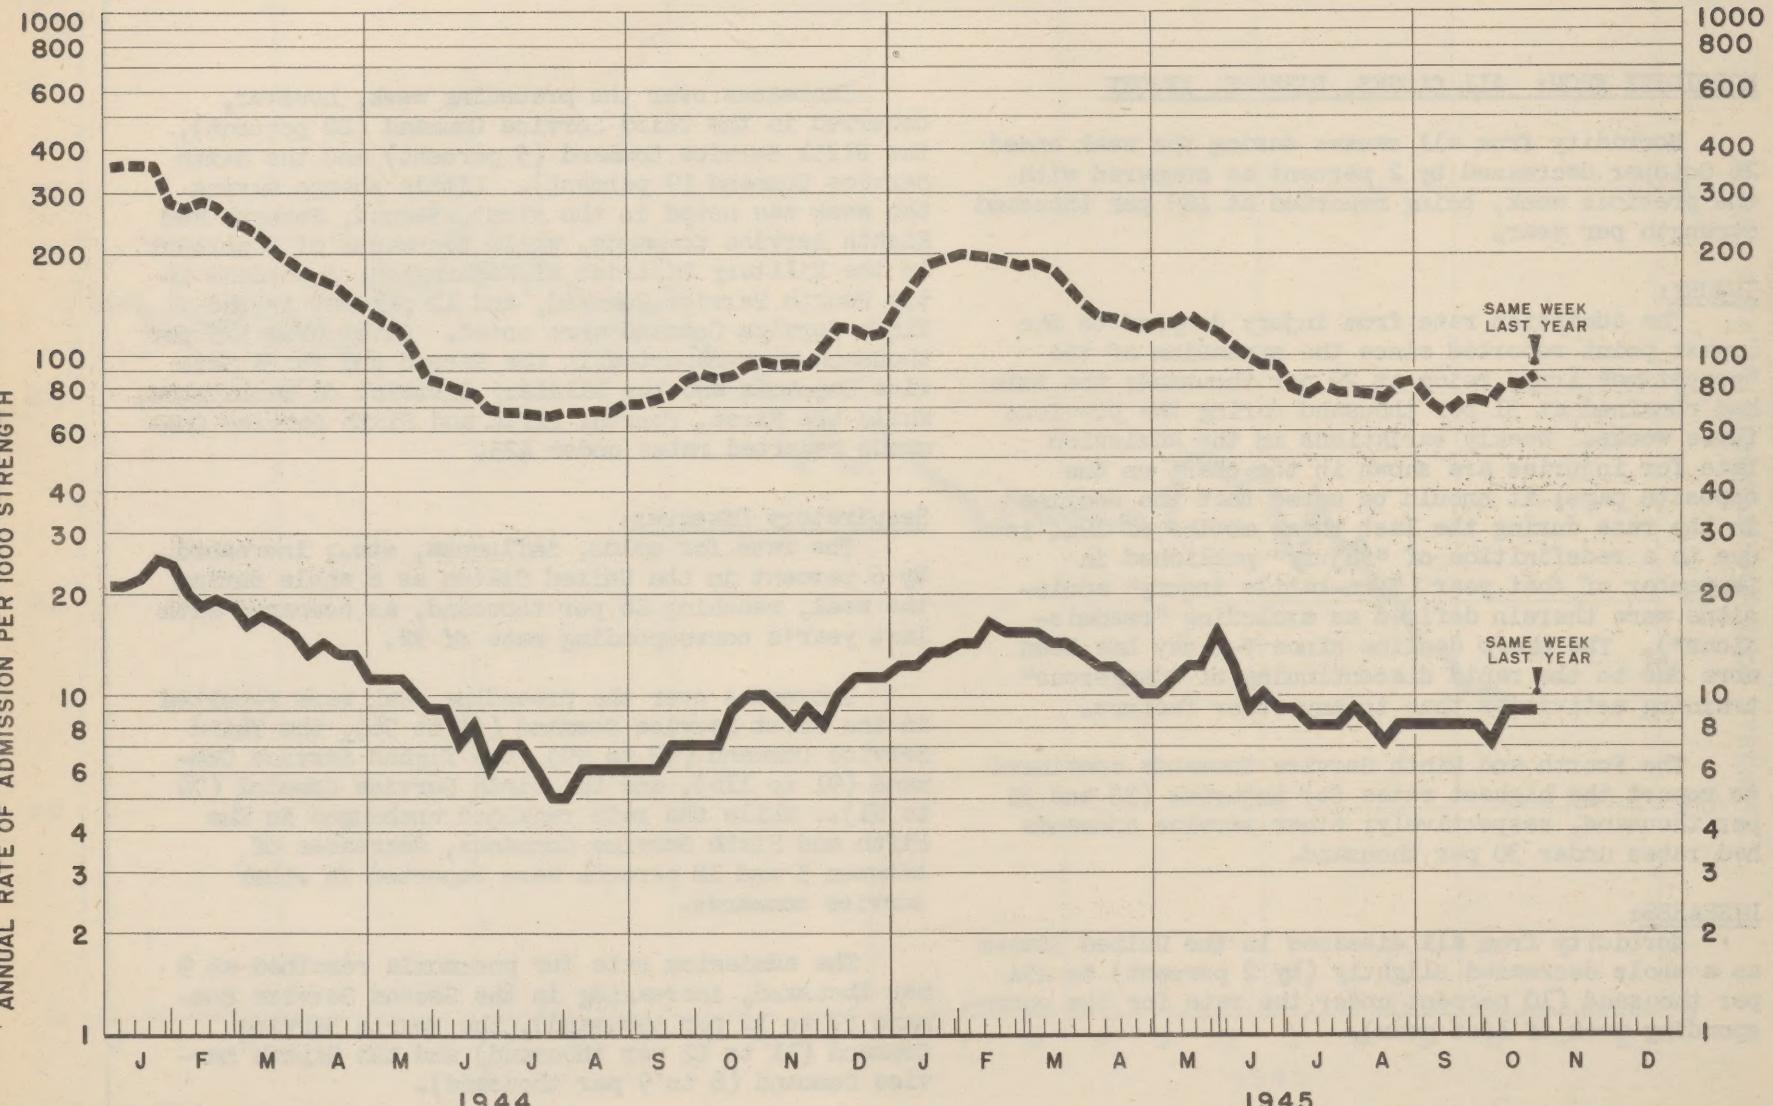

The admission rate for pneumonia remained at 9 per thousand, increasing in the Second Service Command (9 to 12 per thousand), the Fourth Service Command (11 to 12 per thousand) and the Eighth Service Command (6 to 9 per thousand).

COMMENT ON CURRENT TRENDS (CONT'D)

Venereal Diseases:

Morbidity from venereal diseases (excluding EPTS cases) increased by 10 percent during the week to reach 66 per thousand per annum. This reflects in part the normal cyclical trend during the month, since the lowest rate usually occurs during the first week, followed by a rise thereafter until the end of the month. However, the current week's rate is higher than any experienced since Pearl Harbor.

The highest morbidity from these causes was experienced in the Third Service Command, where the rate increased 23 percent during the week to reach 108 admissions per thousand men per year. However, the rate in the Seventh Service Command increased more sharply during the week (by 31 percent), to reach 81 per thousand, while more typical increases for the last week in the month occurred in the Fourth Service Command (5 percent), the Fifth Service Command (15 percent), the Sixth Service Command (2 percent), the Eighth Service Command (16 percent), and the Ninth Service Command (3 percent). Decreases were reported in the Military District of Washington (36 percent under the unusually high rate reported last week) and in the Second Service Command (4 percent). The rate in the First Service Command continued at 35 per thousand.

Other Communicable Diseases:

Morbidity from diarrhea and dysentery remained low (5 per thousand); no service command reported a rate in excess of 7 per thousand.

Five hundred seventy-two cases of scabies were reported during the week as having been excused from duty for treatment.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 28.4 per thousand strength for the week ended 26 October as compared with 33.8 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, increased to 73.3 per thousand troops in the United States. This increase in the rate is due entirely to a decrease in the strength of the Army in the continental United States.

PATIENTS REMAINING UNDER TREATMENT: 26 OCTOBER 1945:

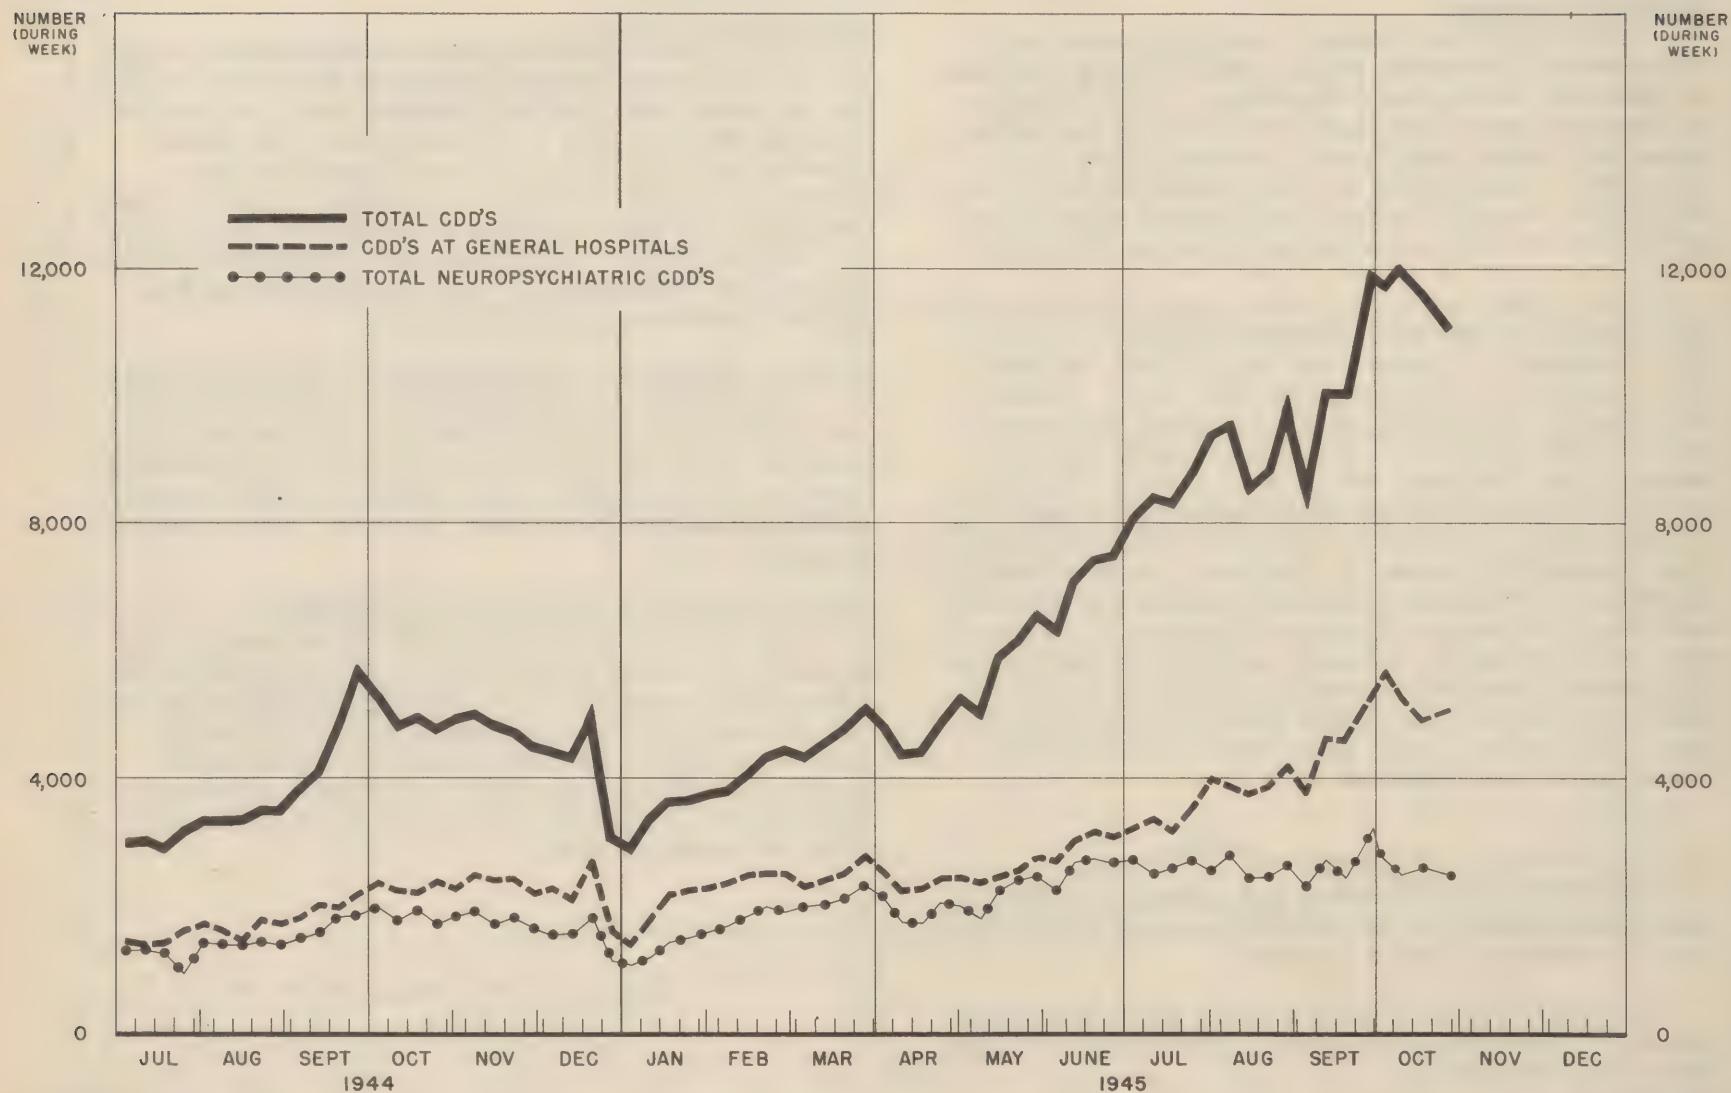

The number of neuropsychiatric cases remaining was 19,519 or about 2000 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 36,900. The number of battle casualty patients remaining decreased by about 3000 to number 65,457.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

In the week ended 26 October there were 11,044 enlisted personnel discharged by CDD, a decrease of about 600 as compared with the previous week. Forty-six percent of these discharges were reported by general hospitals and 36 percent by convalescent hospitals. Among these CDD's were 2437 neuropsychiatric cases, a decrease of about 130 as compared with the previous week.

COMMENT ON RECENT DEVELOPMENTS

FOR THE FOUR WEEK PERIOD ENDED 28 SEPTEMBER 1945

NATURE OF THE DATA:

The data of this Monthly Report, like those of the Weekly Health Reports, have been taken from WD AGO Forms 8-122 rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. However, unlike the Weekly Health Reports which are compiled on the basis of the figures as received, so as to place the information in circulation at the earliest possible time, the figures here presented for the four-week period ended 28 September 1945 include the great majority of the corrected reports as well as reports received too late to be incorporated in the Weekly Health Report.

This Report covers morbidity and mortality data for all individual stations with a strength of 1000 or over and gives details for admissions from venereal diseases and for neuropsychiatric cases.

Charts showing morbidity trends from all causes, from all diseases combined, from injury, and from colds, influenza, etc. are presented on page 26. Similar charts for specified diseases appear on pages 27, 30, and 31. A chart showing mortality trends is presented on page 32. A summary for the month of the number of admissions and corresponding morbidity rates and of the number of deaths and corresponding mortality rates for the United States as a whole and for the service commands is given on pages 33 and 34. The most pertinent morbidity data for individual stations are presented on pages 35 to 56. On pages 57 and 58 the seven stations with the highest rates of admission during the month are shown for each of the morbidity categories considered.

In reading the detailed tables, it should be borne in mind that morbidity (or mortality) rates based on small numbers of cases are not reliable. For this reason the symbol "?" has been placed after rates computed on the basis of 5 or fewer cases. Attention is invited to the definitions of admissions and admission rates and the discussion of the proportion of total Army strength included in the stations covered by this Report as given on page 2. The term "month" in this report is used to denote the four or five-week period based on the number of Fridays in the calendar month.

MORBIDITY FROM ALL CAUSES, DISEASE, AND INJURY:

The admission rate for all causes for the Army in the continental United States decreased to 478 during September, as compared with 522 for the previous month. The rate for diseases decreased by 8%, to 442 per thousand per year, while that for injuries decreased from 44 in August to 36 in September.

A relatively large increase in disease morbidity rates in September as compared with August was recorded in the Fifth Service Command (23 percent); increases of 4 percent or less occurred in the Second and Third Service Commands and the MDW. The rate decreased significantly in other service commands.

The admission rate for injury decreased in all service commands. Decreases in excess of 20 percent were reported in the Sixth, Seventh, and Eighth Service Commands and the MDW. Highest morbidity from injury was reported in the Fourth and Ninth Service Commands, with rates of 41 and 43 per thousand respectively.

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

RESPIRATORY DISEASES:

During September the admission rate for common respiratory diseases decreased by 9 percent (79 per thousand to 72 per thousand). The rate of 81 per thousand reported for September, 1944, is 11 percent over that reported for the current month.

Increases were reported in the Second and Fifth Service Commands (5 percent and 33 percent respectively). The rate remained virtually unchanged in the Sixth Service Command (1 percent increase); decreases were reported in all other service commands. Only in the Military District of Washington was the rate for September, 1945, higher than last year's corresponding rate.

Morbidity from all forms of pneumonia decreased to 7.7 per thousand, about 22% above the rate reported for September, 1944. Pneumonia rates were below those reported for the same period last year in the First and Sixth Service Commands; the Fifth Service Command, however, was 42% above last year's rate, and the current rate in the Military District of Washington is 97% above that for September 1944.

DIARRHEA AND DYSENTERY:

Morbidity from diarrhea and dysentery decreased to 7 per thousand from 8 per thousand in August, but the rates continued lower (about 30 percent) than those reported in the same periods last year. Only the Second and Fifth Service Commands reported rates in excess of 8 per thousand per annum.

VENEREAL DISEASES:

Morbidity from venereal diseases, excluding cases contracted prior to entry into service, continued to increase. The September rate of 56.6 per thousand was higher than any admission rate recorded since Pearl Harbor, and represented an increase of 7 percent over the previous month's figure.

The rate for syphilis acquired while in service increased from 5.2 per thousand in August to 5.8 in September, while that for venereal diseases other than syphilis and gonorrhea moved from 1.0 per thousand to 1.2.

Venereal disease rates decreased in the First, Seventh, and Ninth Service Commands. Morbidity from these causes increased over 50% in the Military District of Washington; 24% in the Third Service Command, 10% to 15% in the Fourth, Fifth, Sixth, and Eighth Service Commands, and 7% in the Second Service Command.

Morbidity represented by venereal EPTS cases was reported at 4.3 per thousand during September as compared with 6.9 per thousand in August. The average weekly number of venereal EPTS cases in September was 291, as compared with 461 in August; the percentage of infection among inductees continued at 3 percent.

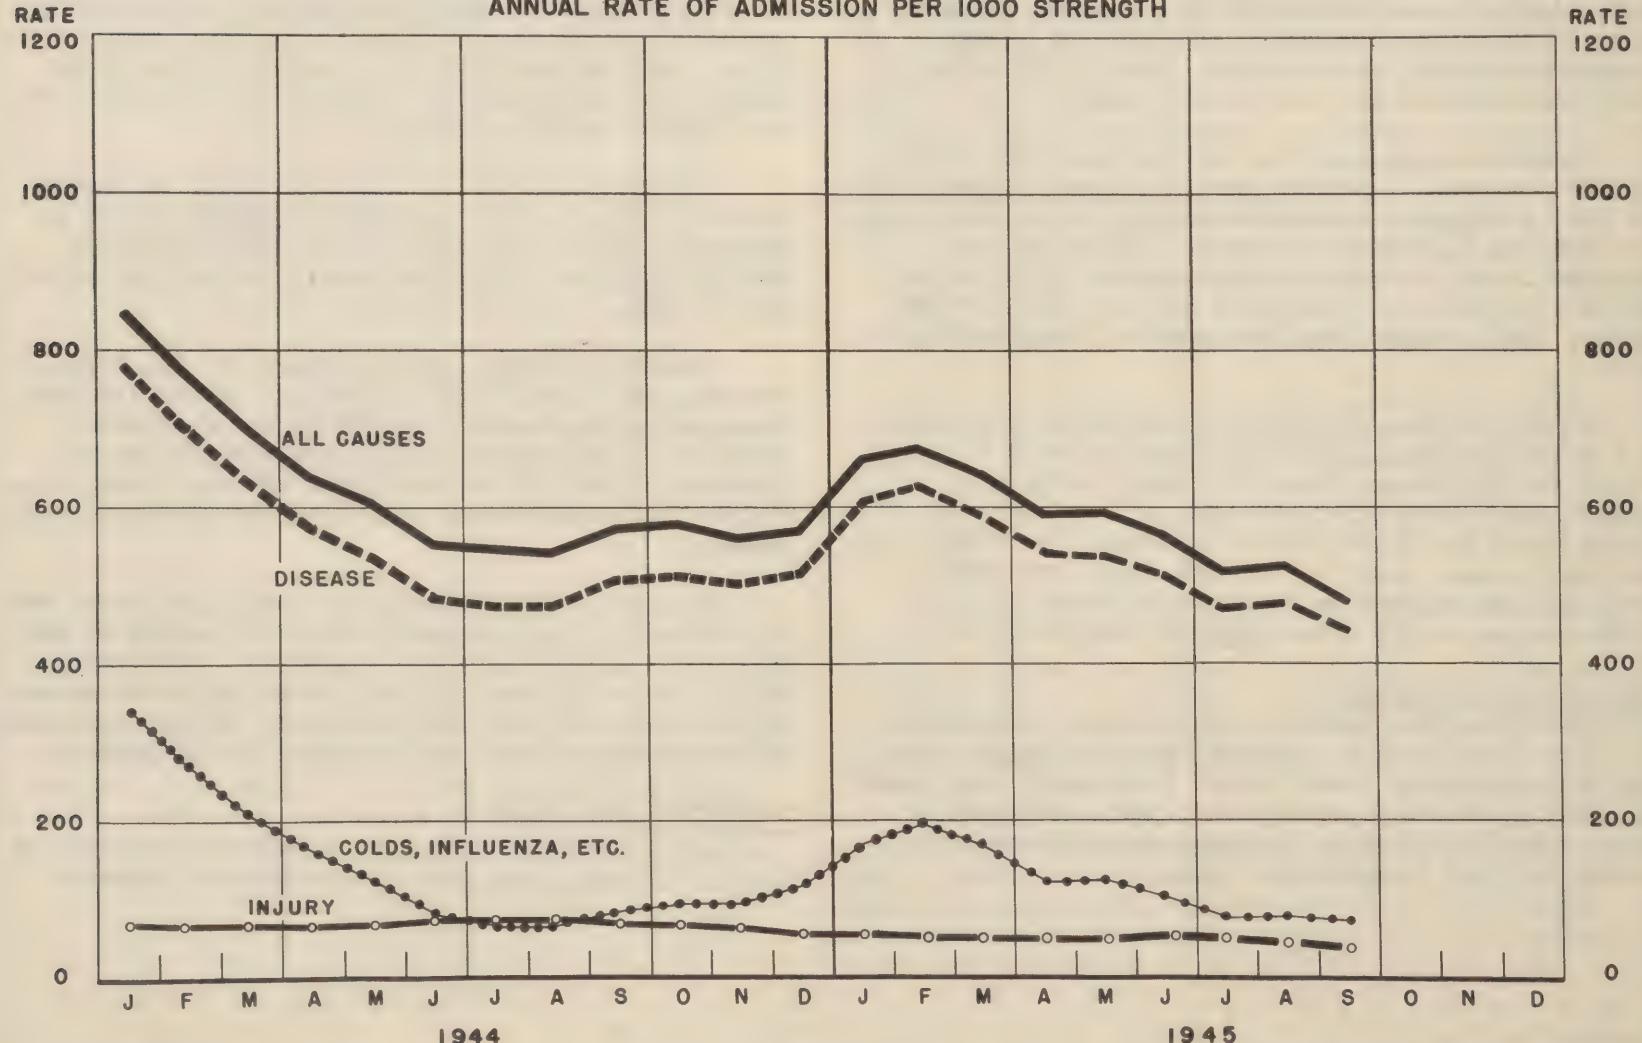

INFECTIOUS HEPATITIS:

Morbidity from infectious hepatitis increased to 3.5 per thousand from 2.9 per thousand in August.

MORBIDITY FROM—PNEUMONIA—DIARRHEA AND DYSENTERY

VENEREAL DISEASES—INFECTIOUS HEPATITIS

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

MEASLES:

Morbidity from measles decreased to 17 cases per week during September, as compared with 19 weekly cases in August. The rate moved from 0.3 to 0.2 per thousand.

MUMPS:

Morbidity from mumps decreased in September to 1.1 per thousand, from 1.9 in August.

SCARLET FEVER:

Morbidity from scarlet fever remained at 0.2 per thousand, the same rate as that reported in September last year. The Fifth Service Command reported a rate of 0.3 per thousand, while a rate of 0.4 was noted in the Military District of Washington.

MENINGOCOCCIC MENINGITIS:

Morbidity from meningitis remained at .2 per thousand in September. The current experience is about 35 percent lower than that during the corresponding period of 1944.

RHEUMATIC FEVER:

Morbidity from rheumatic fever remained at .5 per thousand in September. The First and Fifth Service Commands reported the highest morbidity from this cause (1.0 per thousand).

TUBERCULOSIS:

Morbidity from tuberculosis was reported at 1.8 per thousand in September, a decrease from the rate of 1.4 per thousand in August. The current relatively high level arises in large part as the result of examinations at separation centers which tend to uncover cases which otherwise would be undetected. The rate at stations other than separation centers was 1.2 per thousand in September.

As of 28 September there were 2404 cases of tuberculosis remaining under treatment, representing .9 percent of all patients in hospitals. Of the total cases, 1095 were at Fitzsimons GH and 784 at Bruns GH.

MALARIA:

Morbidity from malaria acquired inside the United States was reported at .1 per thousand in September. The number of cases presumably acquired outside the United States, which were admitted (or readmitted) for treatment in this country averaged about 560 per week, which is the lowest figure so far recorded this year.

As of 28 September there were 1728 cases of malaria under treatment, representing .7 percent of all patients in hospital. Of these, 9 cases were acquired in this country.

NEUROPSYCHIATRIC DISORDERS:

The annual rate of admission for neuropsychiatric disorders decreased by over 30 percent in September to 25.5 per thousand, which is the lowest rate reported since December 1943.

During September there was an average of 2718 CDD's per week given to enlisted men classified as neuropsychiatric cases, or slightly higher than the weekly average for August (2545 CDD's per week). The CDD's in September for men with neuropsychiatric disorders represented 26 percent of all CDD's, as compared with 27 percent in August.

The number of neuropsychiatric cases remaining under treatment as of 28 September was 26,700 or about 6000 less than at the end of August. During September the number of locked ward cases decreased by about 500 to 4358, while the open ward cases

COMMENT ON RECENT DEVELOPMENTS (CONT'D)

decreased by 21 percent. Neurropsychiatric cases remaining represented 10.4 percent of all patients in hospital, with open ward cases being 8.7 percent and locked ward cases 1.7 percent.

MORTALITY:

Mortality from all causes during September was reported at 1.74 per year per thousand strength. The mortality rate from disease was .64 per thousand in September while the reported mortality rate from injury decreased from 1.33 per thousand to 1.03 per thousand.

It should be noted that the reporting of deaths on Forms WD AGO 8-122 is not complete, particularly for deaths from injury, for which the understatement may be as great as 10 percent (see Special Report on Deaths in 1944 in Weekly Health Report, Vol. V, No. 27). The mortality rate from injury when adjusted to allow for this under-reporting is about 1.13 per thousand, resulting in an estimated total death rate from all causes of 1.84 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for Army personnel stationed in this country was about 26 per thousand in September, as compared with 27 per thousand reported for August.

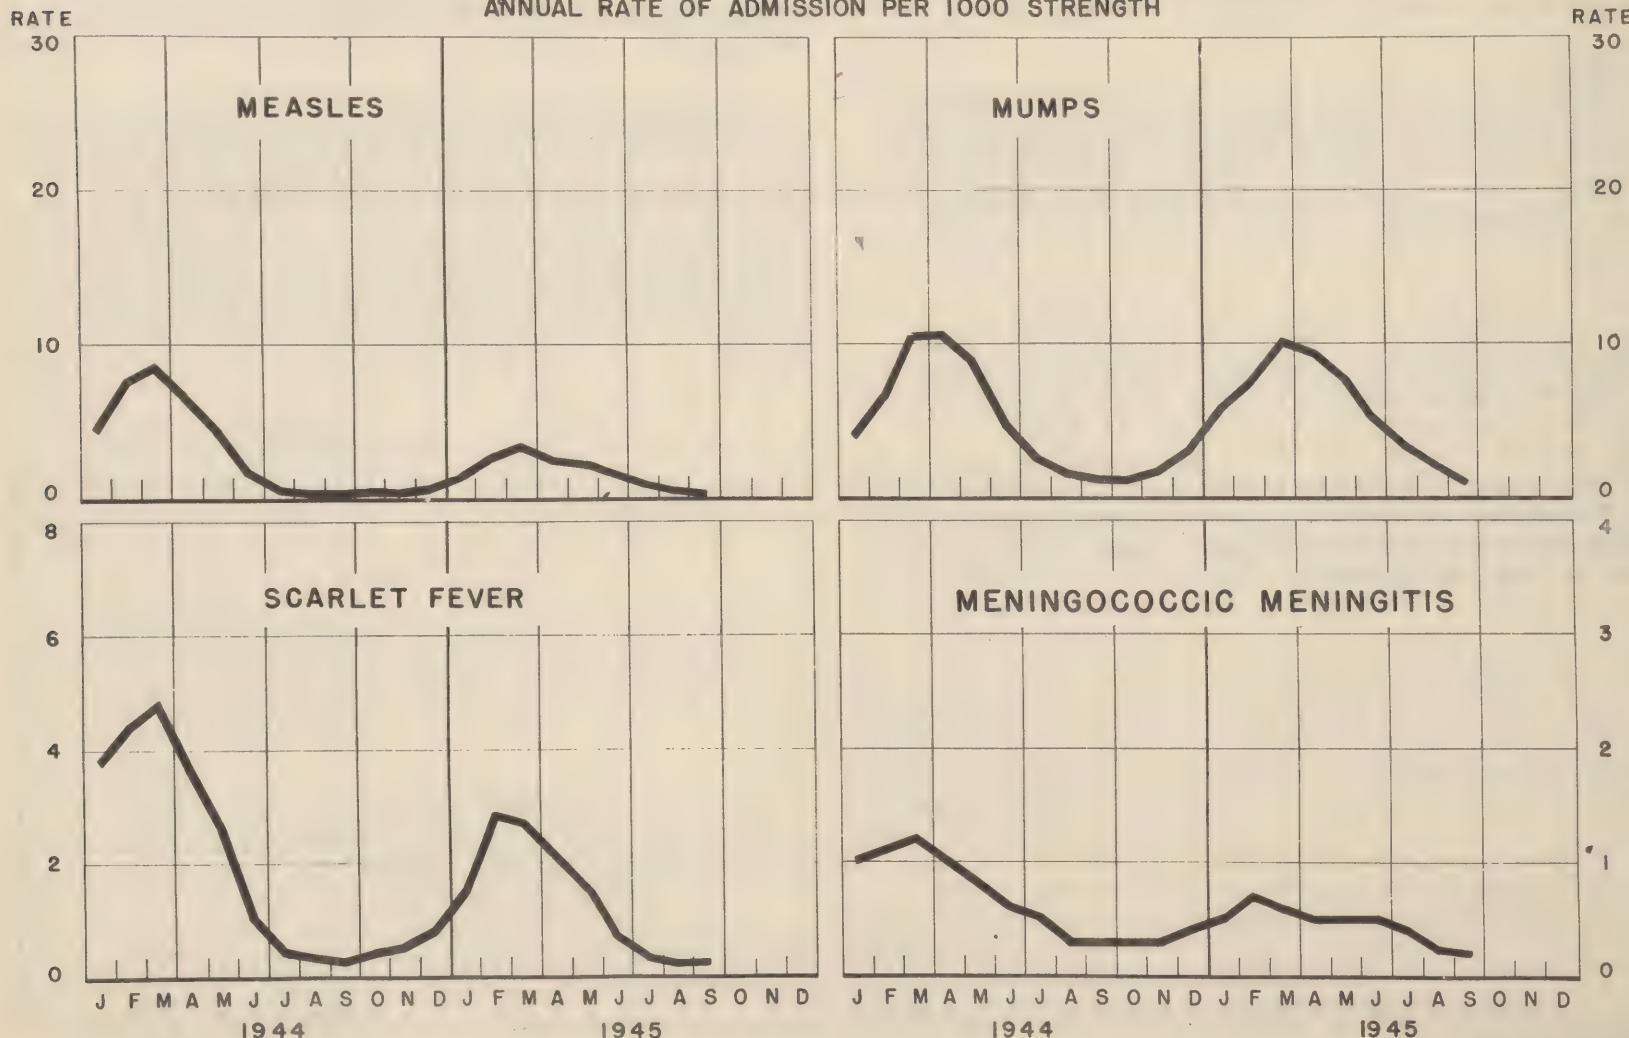

The mean number of non-effectives (including evacuees from overseas) for September was reported at 78 per thousand strength, or 10 percent lower than in Aug.; most of this decrease arose because of a decrease in hospital population at general and convalescent hospitals. The mean number of injury non-effectives per thousand strength decreased in September to 12.8 per thousand from 14.2 per thousand in August.
